

Use Case 10: View Security Log

Primary Actor: Administrator

Stakeholders/Goals: Cybersecurity officials, for investigative purposes

Preconditions: Verify Administrator status

Postconditions: None

Main Success Scenario:

- Trigger Event:
1. User selects security log
 2. System displays verification screen
 3. User enters Administrator credentials
 4. System verifies credentials via database
 5. System displays security log

Extensions:

- 4.a. Administrator credentials are incorrect for the first through fifth attempts
 - 4.a.i. Deny access to security log and inform user of incorrect credentials
- 4.b. User unsuccessfully attempts to verify more than five times sequentially
 - 4.b.i. Deny access to security log and prevent user from further attempts
