Individual use case

Delete Individual reports

-Primary actor: manager

-Stakeholder/goal: Administrators under special instructions from cybersecurity officials

-Precondition: Operator is verified as manager status; manager finds inaccurate individual reports.

-Postcondition: Inaccurate reports being deleted and not exist on the system record anymore.

-main success scenario:

1. manager selects delete button;
2. system displays delete screen ("Are you sure to delete this report?");
3. manager select yes button;
4. individual report is removed from model;
5. system displays the original screen (the one before select delete button)

Extensions:

- 1a. delete button doesn't display -> suggest manager to restart the application
- 1b. delete button doesn't work -> suggest manager to restart the application
- 2a. delete screen is not displayed -> go back to step one to retry OR suggest manager to restart the application
- 3a. yes button doesn't display -> go back to step one to retry OR suggest manager to restart the application
- 3b. yes button doesn't work/respond -> go back to step one to retry OR suggest manager to restart the application
- 4a. report can't be removed -> report to administrator AND suggest manager to restart the application
- 5a. system doesn't go back to the original screen -> suggest manager to restart the application
