<div align="center">Individual Use Case – Delete Account</div>

- Use case name: Delete account

- Primary actor: Administrator

- Stake holders:

- Precondition: Administrator successfully log in

- Postcondition: Specified user account gets removed from system

- Main success scenario:

    1. User selects manage accounts after log in

    2. System confirms user to be administrator

    3. Administrator selects delete user account

    4. System displays list of user accounts

    5. Administrator selects the user account to be removed

    6. System displays confirmation page for deleting such account

    7. Administrator selects confirm to delete account

    8. System removes that account and all information related (user profile, reports etc.) and updates the list displayed

- Extensions:

    1a. Manage accounts cannot be selected

        1. Restart application

        2. Go back to Step 1

2a. User is not an administrator (don't have permission to delete account)

1. Deny access to delete account

2. Display error

3. Go back to Step 1

3a. Delete user account cannot be selected

1. Restart application

2. Go back to Step 1

4a. User list not properly displayed

1. Restart application

2. Go back to Step 1

5a. Administrator selects cancel

1. Exit out of user lists

2. Go back to Step 3

5b. Account is an administrator and cannot be removed

1. Display error

2. Go back to Step 4

7a. Administrator selects cancel

1. Exit out of confirmation page

2. Go back to Step 5

8a. Deletion is incomplete

1. Display error

2. Go back to Step 5

8b. User list not properly updated

1. Restart application

2. Go back to Step 1

- Special requirement: None

- Miscellaneous:

    1. Is administrator allowed to delete accounts with special functionalities (Worker, Manager, other Administrators)?

    2. Will a water report generated by multiple users be deleted upon deletion of one of its creators?
